

Joe Hancock

Senior Consultant, Information and Technology Risk Practice
Deloitte

“Internet Security and Exploitation of IT in Business”

One of the biggest security risks to businesses and individuals are advanced persistent threats according to Joe Hancock, Senior Consultant, Information and Technology Risk at Deloitte. Due to the rise in technological capabilities advancements to protect our electronic and physical information assets there is also protection capabilities of those who have a need to access or disrupt them for gain. When business models began to move to better leverage technology, information became a tangible asset to be bought, sold and used. With its increase in tangible value the threats against it grew and adapted.
